

Orthotic Foam Block

Save Time and Money when Forming Custom Orthotics

Sher Orthotic Foam Blocks are pre-skived, pre-laminated sheets of foam materials that can be heated to quickly and easily fabricate a pair of custom foot orthotics.

The thickness of the material foam block is tapered to give a rear-foot portion that is thicker than the forefoot, allowing for grinding of posting and edges of the orthotic. Pre-laminated blocks save you inventory, space and time with less waste and costs.

Custom Diabetic Sheet

FEATURES:

- **Tri-Layer Construction**

20 Shore A ProCell flesh color top layer, Poron cushioning middle layer, over a firm 35 Shore A Royal Blue EVA base.
